

# Mobile Review Assist

Simplify In-App Reviews

## How to use the Mobile Review Assist plugin

Install the plugin from the Epic Marketplace and make sure it's enabled in your project.

This can be found by navigating to *Edit -> Plugins -> Mobile Review Assist*

## Blueprint Usage

Once the plugin is installed, the blueprint node for requesting an in-app review from the user will be available.

To add the **Request App Review** node, simply right-click anywhere within your blueprint class.

There's no need to differentiate between Android and iOS—the plugin handles this automatically.

This will prompt the user to review your app without leaving the game.

## Support

If you have any questions or encounter issues with the usage, please contact [support@herocode.us](mailto:support@herocode.us), and we will assist you in getting this integrated into your project.
